DENNIS DAVID

SITE RELIABILITY ENGINEER

Kraków, Poland | +48 787 793 194 | dennisdavid1991@gmail.com
linkedin.com/in/arnolddennis | github.com/Arnolddennis | Authorized to work in Poland

PROFESSIONAL PROFILE

Senior Cloud Engineer specializing in Azure and Linux production operations, DevOps automation, incident response and observability. Hands-on with Azure Monitor, Datadog and PagerDuty in production: creating alerts from scratch, investigating service degradation, responding to incidents and restoring services. Experienced with Azure CLI, Bash, PowerShell, Log Analytics, Application Insights, Terraform/ARM/Bicep and Azure DevOps CI/CD pipelines. Supports Linux, Windows, AKS, applications and database workloads in enterprise environments.

TECHNICAL COMPETENCIES

Site reliability and operations: L2/L3 incident response, production recovery, root-cause analysis, PagerDuty acknowledgement and escalation, on-call workflows, SOPs, runbooks, change validation

Azure cloud and troubleshooting: Azure CLI, Virtual Machines, App Services, AKS, Azure SQL, Storage, Azure Resource Health, activity logs, Azure Arc, Entra ID, RBAC, Key Vault, private endpoints, VNets, NSGs

Monitoring and alert engineering: Azure Monitor, Datadog monitors and dashboards, PagerDuty, Log Analytics (KQL), Application Insights, metric/log alerts, action groups, alert routing, Prometheus, Grafana

Linux and automation: Linux service/process troubleshooting, system logs, CPU/memory/disk diagnostics, SSH, Bash, PowerShell, Python, Azure Automation Runbooks, Logic Apps

DevOps and infrastructure as code: Azure DevOps CI/CD, GitHub Actions, Git, YAML pipelines, Terraform, ARM/Bicep, Docker, Kubernetes/AKS, build/release troubleshooting, controlled deployments and rollback validation

PROFESSIONAL EXPERIENCE

LTIMindtree | Senior Cloud Engineer — Azure Monitoring and DevOps

Kraków, Poland | Apr 2024 – Present

- Provide enterprise L2/L3 production troubleshooting across Azure VMs, Linux/Windows systems, App Services, AKS, application dependencies and SQL workloads; investigate performance degradation, infrastructure faults and service availability incidents.
- Build production metric and log alerts from scratch in Azure Monitor and Datadog; configure thresholds, evaluation windows, dashboards, notification routing and KQL-based queries to detect failures and reduce false positives.
- Correlate system logs, KQL results, application telemetry, resource health, configuration changes and deployment events to identify likely fault domains and guide safe recovery under production pressure.
- Deploy and maintain monitoring resources as code with Terraform and ARM/Bicep, including Azure alert rules, diagnostic settings and action groups; use Azure CLI, Bash and PowerShell for incident diagnostics and recovery.
- Support Azure DevOps and GitHub CI/CD workflows: maintain YAML pipelines, troubleshoot build and release failures, validate infrastructure changes, and coordinate controlled deployment and rollback activities.
- Reduced manual incident-resolution effort by approximately 40% through monitoring-driven runbooks and scripted remediation; maintained procedures and troubleshooting documentation for support handovers.
- Troubleshoot Linux production hosts using service-status and system-log inspection, CPU/process analysis, memory and disk checks, SSH and network diagnostics; investigate AKS probes, ingress and scaling failures.
- Respond to production alerts through PagerDuty: acknowledge incidents, assess customer impact, coordinate escalation and recovery with engineering teams, and verify service health before resolution.

PROFESSIONAL EXPERIENCE CONTINUED

Concentrix | Team Leader and IT Trainer

Katowice, Poland | Jun 2023 – Feb 2024

- Coordinated escalated technical-support work and cross-team communication, maintaining service quality, operational metrics and timely issue ownership.
- Defined quality standards and targeted improvement plans; contributed to a reported 92% improvement in customer-satisfaction scores.
- Delivered technical training and wrote reusable support knowledge-base content, troubleshooting guidance and process documentation.

Capgemini | IT Project Specialist

Katowice, Poland | Jun 2022 – Feb 2023

- Supported cloud migration, Azure infrastructure and hybrid platform initiatives, including IaaS/PaaS components, requirements gathering and implementation coordination.
- Configured Azure Monitor, Log Analytics and platform alerting to improve operational visibility; collaborated on Docker/AKS diagnostics and troubleshooting with engineering teams.
- Documented RBAC/access, connectivity and application/infrastructure diagnostic procedures; communicated technical issues and project risks to stakeholders.

Fluidtech Engineers India Pvt. Ltd. | IT and Engineering Business Head

Chennai, India | Feb 2014 – Dec 2018

- Led technical operations and engineering projects supporting industrial equipment, manufacturing and customer environments.
- Implemented telemetry and monitoring dashboards for equipment uptime, fault indicators and production performance; coordinated systems, software changes and backup/continuity procedures.
- Prepared technical documentation and worked with engineering teams and suppliers to track requirements, resolve equipment issues and coordinate operational improvements.

SELECTED PRODUCTION TROUBLESHOOTING AND RELIABILITY WORK

- Alert engineering: Implemented production Azure Monitor alert rules via portal and infrastructure as code; configured Datadog monitors and dashboards to detect application and infrastructure degradation.
- Incident management: Used PagerDuty for on-call alert acknowledgement, incident coordination and escalation; improved diagnostic settings, alert-rule signal quality and Azure Monitor Agent heartbeat troubleshooting.
- Azure networking diagnostics: Investigated connectivity, NSG flow logs, Traffic Analytics and DNS-related visibility issues, using platform telemetry to narrow down network fault domains.
- AKS operations: Supported ingress, health probes, resource scaling and telemetry collection troubleshooting; integrated Prometheus and Grafana visibility for container workloads.
- Azure Update Manager: Supported patching/maintenance diagnostics and documented recovery steps for operational teams.

INDEPENDENT PROJECT

Azure Self-Healing SRE Platform: Portfolio project using Terraform, Azure Monitor, Application Insights, Log Analytics, Logic Apps, PowerShell, Python, Kubernetes, Prometheus and Grafana.

Designed an alert-to-runbook flow for controlled Azure workload recovery; included IaC definitions, managed identity, scoped RBAC, observability, health checks and CI validation. Repository: github.com/Arnolddennis/azure-self-healing-sre-platform

CERTIFICATIONS

Microsoft Certified Azure Administrator Associate (AZ-104) | Microsoft Certified DevOps Engineer Expert (AZ-400)

EDUCATION

Master's in Material Science Engineering | Silesian University of Technology, Gliwice, Poland | 2019–2021

Bachelor's in Mechanical Engineering | Anna University, Chennai, India | 2009–2013

Languages: English — Fluent | Polish — Conversational (spoken B1)
